Let's Start!

Where does all that garbage go?

Learning Outcome

Exchange information about unlikely events or fairly certain conditions that will be fulfilled in present, past or future in spoken or written texts and in work and social contexts.

Can Do Statements

- I can talk about social issues, beliefs, opinions and moral or personal dilemmas.
- I can express compulsory action.
- I can express that a fairly certain condition will be fulfilled.

Ask your partner:

- What do you know about waste management in your city?
- What more can we do to reduce waste?

Let's Explore!

Zero waste is a crucial **initiative***

* An "initiative" is a new plan or process to achieve something or solve a problem.

Instructions: Read the text aloud.

As I've been thinking about how I can be the change I want to see in the world, it is becoming clearer how much waste and pollution negatively affect our world. We produce so much waste! Where does all that garbage go? I realized I have to learn more about zero waste. It's a way of thinking that encourages manufacturers to redesign products so that they can be reused. We must think more about this. If we don't change the way we deal with waste, we will destroy the planet.

The zero waste concept recommends a process that mirrors nature in the way that resources are reused. It's an ethical, cost-effective way to get people to change the way they live and consume to emulate sustainable natural cycles. In a sustainable cycle, objects must be designed so that discarded materials can also be used. Zero waste initiatives say that we must eliminate all discharges into the land, water or air - especially those that threaten humans, and the planet flora and fauna. Getting rid of waste right from the start means that industries and governments have to be heavily involved. Governments must write and implement policy and provide subsidies for industries to support them in their efforts to reduce waste.

If industries have financial motivation and contributions, they will be able to focus on packaging designs, the way things are manufactured and what materials are selected to reduce waste. Zero waste also supports finding ways to eliminate waste other than using landfills or incineration and raising community awareness. If people are more aware of the possibilities for reusing waste to reduce pollution, they will put pressure on their governments to enforce zero waste initiatives. I had to learn the three Rs in school: reduce, reuse, recycle. Zero waste adds one more R: recovery. We will always have waste but we can find new ways to process it. I think if we all work together, we can really make a difference!

Let's Practice!

Zero waste is our objective!

Instructions: Read the sentences. Select the sentences that use mandatory action.

Select the sentences that use mandatory action.

- ☐ 1. I realized I have to learn more about zero waste.
- ☐ 2. We must think more about this.
- ☐ 3. All discarded materials have to be designed to become resources for others to use.
- ☐ 4. We will always have waste, but we can find new ways to process it.
- ☐ 5. We must eliminate all discharges into the land, water or air that are a threat to planetary, human, animal or plant health.
- ☐ 6. Governments must write and implement policy and provide subsidies for industries to support them in their efforts to reduce waste.
- ☐ 7. I had to learn the three Rs in school, reduce, reuse, recycle.
- ☐ 8. The zero waste concept recommends a process similar to the way that resources are reused in nature.

Let's Practice!

Let's reduce waste!

Instructions: Circle the correct word to complete the sentences into the paragraph.

If industries have financial motivation and contributions, they will be able to focusing / focuses / focus on packaging designs, manufacturing processes and material selection that will reduce waste. If people are / is / be more aware of the possibilities for reusing waste to reduce pollution, they will put pressure in / on / at their governments to enforce zero waste initiatives. I had to learn the three Rs in school, reduce, reuse, recycle. Zero waste adds one more R: recovery. I think if we all works/ work / working together, we can really make a difference!

Extension Activity

Develop an initiative.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- With a partner, come up with an idea for improving the environment in your city or country.
- Develop an initiative plan. What will you do? Who will do it?
- How will you do it?
- Make a poster for your plan. Include pictures if possible.
- Present your poster and plan to your group.
- Listen to the other presentations and as a group, choose the plan that you think is best.

Self-Assessment

Yes

No

I write an initiative plan with a partner.

☐ ☐

I create a poster to demonstrate my plan.

☐ ☐

I present my initiative plan to a group.

☐ ☐

I help decide on the best plan of the group.

☐ ☐

Target Words

- waste** (noun): unwanted material
e.g. We produce so much waste!
- ethical** (adjective): relating to moral principles
e.g. It's an ethical, cost-effective way to get people to change the way they live and consume to emulate sustainable natural cycles.
- to emulate** (verb): to match; to surpass
e.g. We emulate people whom we admire.
- sustainable** (adjective): able to be maintained
e.g. We need to find sustainable alternatives.
- discarded** (adjective): thrown away
e.g. Objects must be designed so that discarded materials can also be used.
- discharge** (noun): substance allowed to go into the air, water or land
e.g. Zero waste initiatives say that we must eliminate all discharges into the land, water or air - especially those that threaten humans, and the planet's flora and fauna.

Learning Points

Must, Have to, Had to for What is Compulsory

When you want to talk about what is mandatory or required, you can use the modals **must**, **have to** and **had to**.

You use **must** and **has/have to** to talk about what is compulsory in the present or future.

For example:

*All travelers to the United States **have to** have proper identification.*

*All changes in the law **must** be passed by a majority.*

When you want to talk about something that was necessary or obligatory in the past, you use **had to**. You do not use **must**, as it has another meaning when used to talk about past situations.

For example:

*When I lived in Japan, I **had to** sort my garbage very carefully.*

Examples:

- *I realized I **have to** learn more about zero waste.*
- *We **must** think more about this.*
- *In a sustainable cycle, objects **must** be designed so that discarded materials can also be used.*
- *Zero waste initiatives say that we **must** eliminate all discharges into the land, water or air - especially those that threaten humans, and the planet flora and fauna.*
- *Governments **must** write and implement policy and provide subsidies for industries to support them in their efforts to reduce waste.*
- *I **had to** learn the three Rs in school: reduce, reuse, recycle.*

Learning Points

First Conditional: If and If not

You use the **first conditional** to talk about real or possible situations. When you present the condition, it is common to use *if*.

The structure of the **first conditional** is usually If+present simple (If clause) and will+infinitive (result clause).

Remember to use a comma (,) if the If clause is at the beginning of the sentence.

For example: *If we don't change the way we deal with waste, we will destroy the planet.*

You can use other phrases instead of *if* or *if not* to make your language more varied and sophisticated.

Two alternatives you can use to introduce the condition clause are: *provided that* and *so long as*.

For example:

If you come down from the tree now, I won't call the fire department.

= **So long as** you come down from the tree now, I won't call the fire department.

= **Provided that** you come down from the tree now, I won't call the fire department.

Provided that is more formal than *if*.

Examples:

- *If industries have financial motivation and contributions, they will be able to focus on packaging designs, the way things are manufactured and what materials are selected to reduce waste.*
- *If people are more aware of the possibilities for reusing waste to reduce pollution, they will put pressure on their governments to enforce zero waste initiatives.*
- *I think if we all work together, we can really make a difference!*
